Radiative transfer is the physical phenomenon of energy transfer in the form of electromagnetic radiation. The propagation of radiation through a medium is affected by absorption, emission, and scattering processes. The equation of radiative transfer describes these interactions mathematically. Equations of radiative transfer have application in a wide variety of subjects including optics ...

Methods. At the core of a radiative transfer model lies the radiative transfer equation that is numerically solved using a solver such as a discrete ordinate method or a Monte Carlo method. The radiative transfer equation is a monochromatic equation to calculate radiance in a single layer of the Earth's atmosphere. To calculate the radiance for a spectral region with a finite width (e.g., to ...

The heat-transfer coefficient between fluid and tube wall in turbulent flow depends upon the physical and thermal properties of the fluid. When density changes across the diameter of the tube are large (for example, when the fluid is near the critical point), the variable density can affect the transfer of momentum and heat.

Methods and Applications in Fluorescence focuses on new developments in fluorescence spectroscopy, imaging, microscopy, fluorescent probes, labels and (nano)materials. It will feature both methods and advanced (bio)applications and accepts original research articles, reviews and technical notes.

Basic to all of these applications is the fact that heat transfer processes for buildings are usually ill defined, time dependent, multi-dimensional, and in many cases non-linear.

4.1.1. Closing of the mould. The first step in the steam-chest moulding cycle is the closing of the mould.

4.1.2. Filling of the mould. Foamed beads are drawn by air pressure out of a container and blown into the mould by an injector, which usually functions according to the venturi-principle.

Past and present developments in polymer bead foams and

Overview. HEAT2 is a PC-program for two-dimensional transient and steady-state heat transfer. The program is along with the three-dimensional version HEAT3 used by more than 1000 consultants and 100 universities and research institutes worldwide.
