Latent growth modeling is a statistical technique used in the structural equation modeling (SEM) framework to

estimate growth trajectories. It is a longitudinal analysis technique to estimate growth over a period of time. It is widely used in the field of behavioral science, education and social science.

### **Latent growth modeling - Wikipedia**

In this course, instructor Haydn Thomas walks through the benefits of using process modeling to help make sense of your organization's business activities and see how they interconnect. Haydn defines business process modeling, covers the most commonly used business process modeling diagramsâ€”context, functional flow, cross-functional flow, and flowchartâ€”and explains when, why, and how to ...

### **Business Analysis Foundations: Business Process Modeling**

Threat modeling is a process by which potential threats, such as structural vulnerabilities can be identified, enumerated, and prioritized â€” all from a hypothetical attackerâ€™s point of view. The purpose of threat modeling is to provide defenders with a systematic analysis of the probable attackerâ€™s profile, the most likely attack vectors, and the assets most desired by an attacker.

### **Threat model - Wikipedia**

In this course, you participate in an immersive, simulated case study, providing you with the business modeling skills necessary to produce Enterprise Architectures, Business Cases, Business Requirements and Software Requirements documents. You learn to apply analysis and modeling techniques such as Business Process Model and Notation (BPMN) to describe business workflows.
