Neural correlates of second-language word learning: minimal instruction produces rapid change Judith McLaughlin, Lee Osterhout & Albert Kim Adult second-language (L2) learning is often claimed to be slow and laborious compared to native language (L1) acquisition, but little is known about the rate of L2 word learning. Here we

However, to date, few studies have explored the neural correlates of reading comprehension in the presence of illustrations, and, to the best of our knowledge, the current study is the first study using fMRI to explore the effects of text illustrations.

The second goal of the present study was to examine the neural correlates of the success versus failure of one's deceptive attempt. To date, no neuroimaging studies have specifically examined whether neural responses are similar or different when the deceiver succeeds or fails to dupe the recipient.

This paper was published in T. Metzinger, ed, Neural Correlates of Consciousness: Empirical and Conceptual Questions, MIT Press, 2000. It was first presented at Association for the Scientific Study of Consciousness conference on "Neural Correlates of Consciousness" in Bremen, June 1998.

What is a Neural Correlate of Consciousness?

Temporal summation of second pain (TSSP) occurs when painful stimuli are presented repetitively (at 0.33 Hz) and results from a C-fibre evoked enhancement (or "wind-up") of the dorsal horn neurons.

The second mover can reciprocate the first mover's trust, giving them both a higher payoff, or defect on the first mover's trust, resulting in an even larger payoff for the second mover and a payoff of zero for the first mover. Partners played 36 voluntary trust games and 16 control games .
