MATH 383 " Height Functions in Number Theory Siyan Daniel Li what happens for  $O(C)$  !what happens for  $A$ , where  $A$  is any integral domain containing  $Z$  that is  $\mathbb{Z}$ -finitely generated over  $Z$ .

### Notes for MATH 383 " Height Functions in Number Theory

An algebraic number field is a finite extension of  $\mathbb{Q}$ ; an algebraic number is an element of an algebraic number field. Algebraic number theory studies the arithmetic of algebraic number fields " the ring of integers in the number field, the ideals and units in the ring of integers, the extent to which unique factorization holds, and so on.

and 1990s, elliptic curves revolutionized number theory, providing striking new insights into the congruent number problem, primality testing, public-key cryptography, attacks on public-key systems, and playing a central role in Andrew Wiles's resolution of Fermat's Last Theorem.

The main objects that we study in algebraic number theory are number fields, rings of integers of number fields, unit groups, ideal class groups, norms, traces, discriminants, prime ideals, Hilbert and other class fields and associated reciprocity laws, zeta and L-functions, and algorithms for computing each of the above. 1.2.1 Topics in this ...
