1.. Introduction In this paper we introduce a new method for the analysis of problems governed by partial differential equations such as, for example, solids, structures and fluids.

In physics and mathematics, the dimension of a mathematical space (or object) is informally defined as the minimum number of coordinates needed to specify any point within it. Thus a line has a dimension of one because only one coordinate is needed to specify a point on it – for example, the point at 5 on a number line. A surface such as a plane or the surface of a cylinder or sphere has a ...

The Euler characteristic can be defined for connected plane graphs by the same $V - E + F$ formula as for polyhedral surfaces, where F is the number of faces in the graph, including the exterior face.. The Euler characteristic of any plane connected graph G is 2. This is easily proved by induction on the number of faces determined by G , starting with a tree as the base case.
