One representative example of topological systems is the topological insulator (TI), which exhibits metallic surface states regardless of whether a finite band gap exists in the bulk. This scenario is beyond the scope of the classical band structure model, which distinguishes conductors and insulators in terms of gap size.

Towards the manipulation of topological states of matter

Brouwer's fixed-point theorem is a fixed-point theorem in topology, named after L. E. J. (Bertus) Brouwer. It states that for any continuous function mapping a compact convex set to itself there is a point such that $f(x) = x$. The simplest forms of Brouwer's theorem are for continuous functions from a closed interval in the real numbers to itself or from a closed disk to itself.

Brouwer fixed-point theorem - Wikipedia

In mathematics, a sheaf is a tool for systematically tracking locally defined data attached to the open sets of a topological space. The data can be restricted to smaller open sets, and the data assigned to an open set is equivalent to all collections of compatible data assigned to collections of smaller open sets covering the original one.

(2007-11-02) Topological Spaces (Brouwer, 1913) Defining a topology is singling out some subsets as open. A set E is said to be a topological space when it possesses a specific topology. Formally, a topology is simply a particular collection of subsets, called open sets verifying the following axiomatic properties (L.E.J. Brouwer, 1913).

Math B.S./M.B.A. Accelerated Degree Program. The Department of Mathematics, Statistics and Computer Science together with the Graduate School of Management offers an accelerated degree program which allows students to earn both their B.S. degree in Math and a master of business administration (M.B.A.) all

within in a five-year time period.

Dynamical systems theory has emerged in the movement sciences as a viable framework for modeling athletic performance. From a dynamical systems perspective, the human movement system is a highly intricate network of co-dependent sub-systems (e.g. respiratory, circulatory, nervous, skeletomuscular, perceptual) that are composed of a large number of interacting components (e.g. blood cells ...
