Electrophilic reactions to other unsaturated compounds than arenes generally lead to electrophilic addition rather than substitution.. Radical substitution. A radical substitution reaction involves radicals. An example is the Hunsdiecker reaction.. Organometallic substitution. Coupling reactions are a class of metal-catalyzed reactions involving an organometallic compound RM and an organic ...

Chemistry is the scientific discipline involved with elements and compounds composed of atoms, molecules and ions: their composition, structure, properties, behavior and the changes they undergo during a reaction with other substances. In the scope of its subject, chemistry occupies an intermediate position between physics and biology. It is sometimes called the central science because it ...

Simple phosphine ligand-exchange reactions induce the facile and efficient architecture transformation of a star polymer to a linear polymer and back to a star polymer, providing a promising approach toward the construction of new dynamic polymeric materials.

The rapid increase in the breadth and scope of transformations that involve metal-promoted activation of C-H bonds is fundamentally changing the field of synthetic chemistry. Direct arylation polymerization is a newly established synthetic protocol for atom economical, effective, and affordable preparation of conjugated
